

Quick Reference — Payroll Vouchers

The centralized voucher workflow and every anti-fraud rail.

The stages

- Draft → Awaiting supervisor → Submitted → Under review → Approved → Payment authorized.
- Returned-for-correction possible at any pre-payment stage (reason ≥ 10 characters).

Who does what

- Branch officer/supervisor creates + submits · supervisor approves · finance officer reviews + approves · MoF/admin authorizes payment.

The rails

- One voucher per branch per period — duplicates rejected.
- Double-pay guard: an employee cannot be on two active vouchers in one period.
- Immutable after submission — corrections only via official return (revision increments).
- Creator can never approve own voucher; authorizer ≠ creator AND ≠ approver.
- Payment-authorized vouchers are permanent records; drafts are the only deletable state.

Auto-generation

- Generate-from-run splits a payroll run into one draft voucher per branch; unassigned employees are reported.
